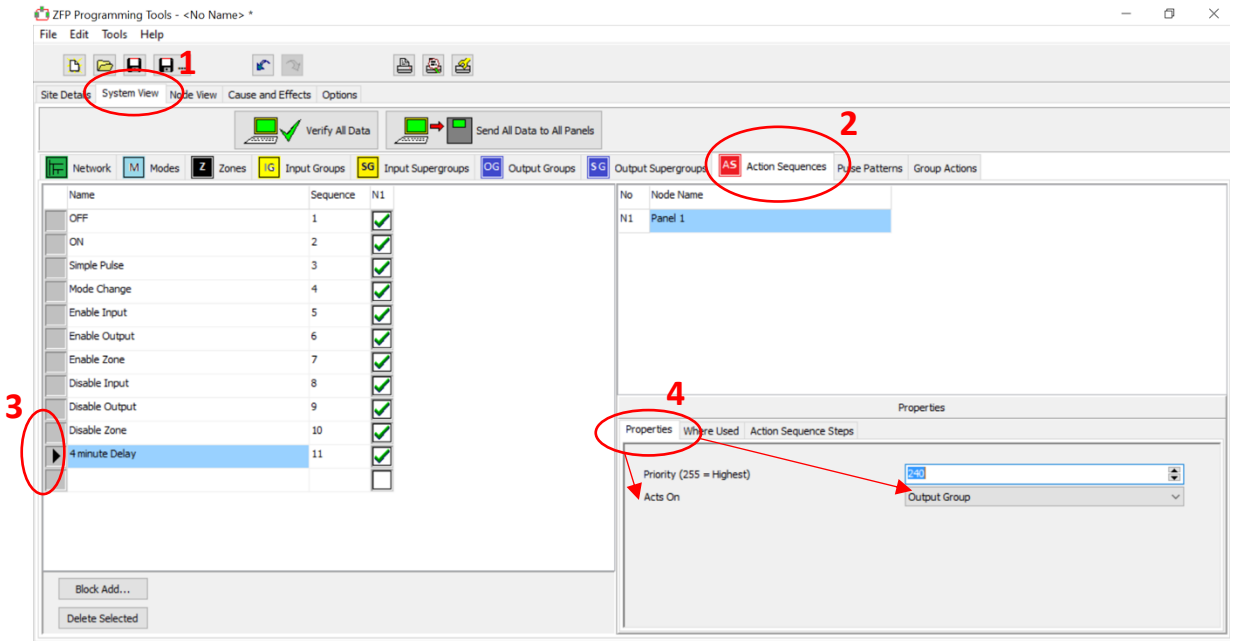
Adding an Action Sequence to a ZFP config via ZTOOLS

Firstly, take a download from the panel using ZTOOLS, then follow the numbered steps below for Fig 1.

1. Click on System View.
2. Click on Action Sequences.
3. Click on the next available text box and add text for the new Action Sequence name. For this exercise we are setting up a 4 minute delay on an Output.
4. Click on Properties and set the Acts On for what you want the delay to be used with, in this example we are using Output Group.

Fig 1



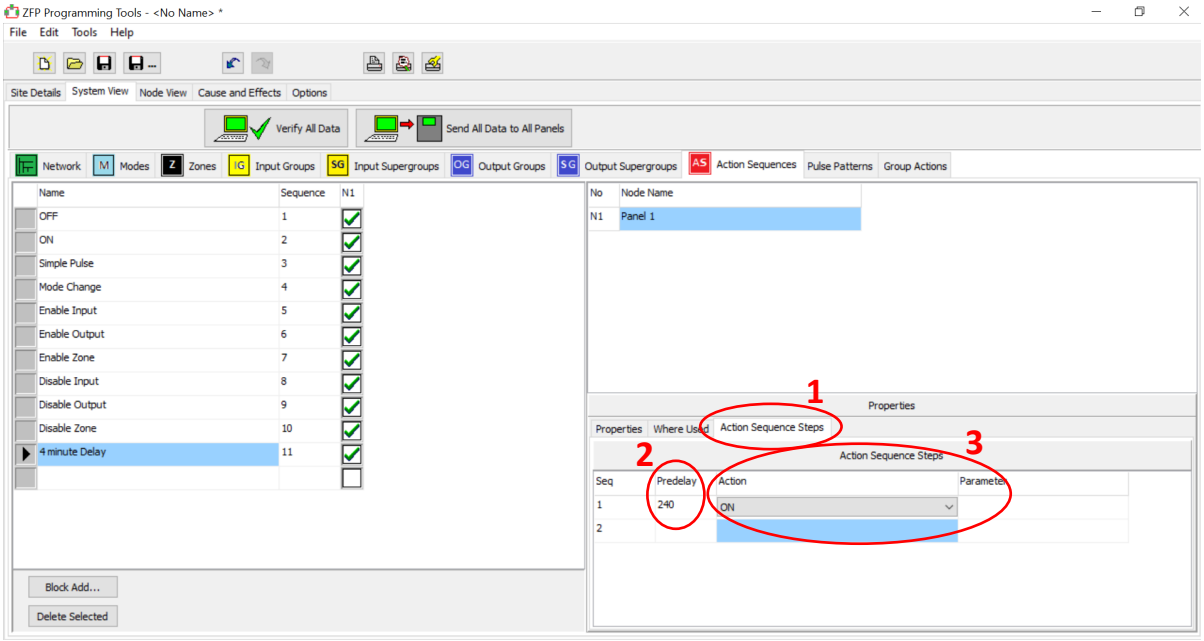
Continue using the System View tab and Action Sequence tab, then follow the steps on page 2, Fig 2 to complete the Action Sequence.

1. Click on Action Sequence Steps.

2. Click on the Predelay and choose (in seconds) the delay time required.

3. Click on the Action drop down box and choose On.

Fig 2



The steps below and Fig 3 explain how to add the new Action Sequence to a Cause and Effect tree.

Also see App Note ******* for more information on building a Cause and Effects tree.

1. Click on Cause and Effects.

2. Create a new Cause and Effects tree using the 4 minute delay Action Sequence.
